

Problem Statement

Project Title: EduMentor AI – Intelligent Personalized Learning Assistant

Background

Students often struggle to receive personalized academic guidance. Traditional learning systems provide identical content to all learners, regardless of their abilities, pace, or interests.

Problem Statement

Design and develop an AI-powered learning assistant that provides personalized learning support, answers academic questions, recommends study resources, and helps students learn more efficiently using IBM watsonx.ai and a Flask-based web application.

Objectives

- Personalized AI assistance
- Instant doubt solving
- Topic recommendations
- Easy-to-use web interface
- Integration with IBM watsonx.ai

Expected Outcome

A secure and user-friendly AI learning platform that improves student understanding, engagement, and self-paced learning.
